## 1 Group Theory

### 1.1 Spring 2020 #1

- Show that any group of order 2020 is solvable.
- Give (without proof) a classification of all abelian groups of order 2020.
- Describe one nonabelian group of order 2020.

### 1.2 Spring 2020 #2

Let  $H$  be a normal subgroup of a finite group  $G$  where the order of  $H$  and the index of  $H$  in  $G$  are relatively prime. Prove that no other subgroup of  $G$  has the same order as  $H$ .

### 1.3 Fall 2019 #1

Let  $G$  be a finite group with  $n$  distinct conjugacy classes. Let  $g_1 \cdots g_n$  be representatives of the conjugacy classes of  $G$ .

Prove that if  $g_i g_j = g_j g_i$  for all  $i, j$  then  $G$  is abelian.

### 1.4 Fall 2019 #2

Let  $G$  be a group of order 105 and let  $P, Q, R$  be Sylow 3, 5, 7 subgroups respectively.

- Prove that at least one of  $Q$  and  $R$  is normal in  $G$ .
- Prove that  $G$  has a cyclic subgroup of order 35.
- Prove that both  $Q$  and  $R$  are normal in  $G$ .
- Prove that if  $P$  is normal in  $G$  then  $G$  is cyclic.

### 1.5 Spring 2019 #3

How many isomorphism classes are there of groups of order 45?

Describe a representative from each class.

**1.6 Spring 2019 #4**

For a finite group  $G$ , let  $c(G)$  denote the number of conjugacy classes of  $G$ .

- (a) Prove that if two elements of  $G$  are chosen uniformly at random, then the probability they commute is precisely

$$\frac{c(G)}{|G|}.$$

- (b) State the class equation for a finite group.

- (c) Using the class equation (or otherwise) show that the probability in part (a) is at most

$$\frac{1}{2} + \frac{1}{2[G : Z(G)]}.$$

Here, as usual,  $Z(G)$  denotes the center of  $G$ .

**1.7 Fall 2018 #1**

Let  $G$  be a finite group whose order is divisible by a prime number  $p$ . Let  $P$  be a normal  $p$ -subgroup of  $G$  (so  $|P| = p^c$  for some  $c$ ).

- (a) Show that  $P$  is contained in every Sylow  $p$ -subgroup of  $G$ .
- (b) Let  $M$  be a maximal proper subgroup of  $G$ . Show that either  $P \subseteq M$  or  $|G/M| = p^b$  for some  $b \leq c$ .

**1.8 Fall 2018 #2**

- (a) Suppose the group  $G$  acts on the set  $X$ . Show that the stabilizers of elements in the same orbit are conjugate.
- (b) Let  $G$  be a finite group and let  $H$  be a proper subgroup. Show that the union of the conjugates of  $H$  is strictly smaller than  $G$ , i.e.

$$\bigcup_{g \in G} gHg^{-1} \subsetneq G$$

- (c) Suppose  $G$  is a finite group acting transitively on a set  $S$  with at least 2 elements. Show that there is an element of  $G$  with no fixed points in  $S$ .

**1.9 Spring 2018 #1**

- (a) Use the Class Equation (equivalently, the conjugation action of a group on itself) to prove that any  $p$ -group (a group whose order is a positive power of a prime integer  $p$ ) has a nontrivial center.
  - (b) Prove that any group of order  $p^2$  (where  $p$  is prime) is abelian.
  - (c) Prove that any group of order  $5^2 \cdot 7^2$  is abelian.
  - (d) Write down exactly one representative in each isomorphism class of groups of order  $5^2 \cdot 7^2$ .
- 

**1.10 Fall 2012 #1**

Let  $G$  be a finite group and  $X$  a set on which  $G$  acts.

- a. Let  $x \in X$  and  $G_x := \{g \in G \mid g \cdot x = x\}$ . Show that  $G_x$  is a subgroup of  $G$ .
- b. Let  $x \in X$  and  $G \cdot x := \{g \cdot x \mid g \in G\}$ . Prove that there is a bijection between elements in  $G \cdot x$  and the left cosets of  $G_x$  in  $G$ .

**1.11 Fall 2012 #2**

Let  $G$  be a group of order 30.

- a. Show that  $G$  contains normal subgroups of orders 3, 5, and 15.
- b. Give all possible presentations and relations for  $G$ .
- c. Determine how many groups of order 30 there are up to isomorphism.

**1.12 Spring 2012 #2**

Let  $G$  be a finite group and  $p$  a prime number such that there is a normal subgroup  $H \trianglelefteq G$  with  $|H| = p^i > 1$ .

- a. Show that  $H$  is a subgroup of any Sylow  $p$ -subgroup of  $G$ .
- b. Show that  $G$  contains a nonzero abelian normal subgroup of order divisible by  $p$ .

**1.13 Spring 2012 #3**

Let  $G$  be a group of order 70.

- a. Show that  $G$  is not simple.
- b. Exhibit 3 nonisomorphic groups of order 70 and prove that they are not isomorphic.

**1.14 Fall 2017 #1**

Suppose the group  $G$  acts on the set  $A$ . Assume this action is faithful (recall that this means that the kernel of the homomorphism from  $G$  to  $\text{Sym}(A)$  which gives the action is trivial) and transitive (for all  $a, b$  in  $A$ , there exists  $g$  in  $G$  such that  $g \cdot a = b$ .)

- (a) For  $a \in A$ , let  $G_a$  denote the stabilizer of  $a$  in  $G$ . Prove that for any  $a \in A$ ,

$$\bigcap_{\sigma \in G} \sigma G_a \sigma^{-1} = \{1\}.$$

- (b) Suppose that  $G$  is abelian. Prove that  $|G| = |A|$ . Deduce that every abelian transitive subgroup of  $S_n$  has order  $n$ .

**1.15 Fall 2017 #2**

- (a) Classify the abelian groups of order 36.

For the rest of the problem, assume that  $G$  is a non-abelian group of order 36.

You may assume that the only subgroup of order 12 in  $S_4$  is  $A_4$  and that  $A_4$  has no subgroup of order 6.

- (b) Prove that if the 2-Sylow subgroup of  $G$  is normal,  $G$  has a normal subgroup  $N$  such that  $G/N$  is isomorphic to  $A_4$ .
- (c) Show that if  $G$  has a normal subgroup  $N$  such that  $G/N$  is isomorphic to  $A_4$  and a subgroup  $H$  isomorphic to  $A_4$  it must be the direct product of  $N$  and  $H$ .
- (d) Show that the dihedral group of order 36 is a non-abelian group of order 36 whose Sylow-2 subgroup is not normal.

**1.16 Spring 2017 #1**

Let  $G$  be a finite group and  $\pi : G \rightarrow \text{Sym}(G)$  the Cayley representation. (Recall that this means that for an element  $x \in G$ ,  $\pi(x)$  acts by left translation on  $G$ .)

Prove that  $\pi(x)$  is an odd permutation  $\iff$  the order  $|\pi(x)|$  of  $\pi(x)$  is even and  $|G|/|\pi(x)|$  is odd.

**1.17 Spring 2017 #2**

- a. How many isomorphism classes of abelian groups of order 56 are there? Give a representative for one of each class.
- b. Prove that if  $G$  is a group of order 56, then either the Sylow-2 subgroup or the Sylow-7 subgroup is normal.
- c. Give two non-isomorphic groups of order 56 where the Sylow-7 subgroup is normal and the Sylow-2 subgroup is *not* normal. Justify that these two groups are not isomorphic.

**1.18 Fall 2016 #1**

Let  $G$  be a finite group and  $s, t \in G$  be two distinct elements of order 2. Show that subgroup of  $G$  generated by  $s$  and  $t$  is a dihedral group.

Recall that the dihedral groups of order  $2m$  for  $m \geq 2$  are of the form

$$D_{2m} = \langle \sigma, \tau \mid \sigma^m = 1 = \tau^2, \tau\sigma = \sigma^{-1}\tau \rangle.$$

**1.19 Fall 2016 #3**

How many groups are there up to isomorphism of order  $pq$  where  $p < q$  are prime integers?

**1.20 ★ Fall 2016 #7**

- Define what it means for a group  $G$  to be *solvable*.
- Show that every group  $G$  of order 36 is solvable.

Hint: you can use that  $S_4$  is solvable.

**1.21 Spring 2016 #3**

- State the three Sylow theorems.
- Prove that any group of order 1225 is abelian.
- Write down exactly one representative in each isomorphism class of abelian groups of order 1225.

**1.22 Spring 2016 #5**

Let  $G$  be a finite group acting on a set  $X$ . For  $x \in X$ , let  $G_x$  be the stabilizer of  $x$  and  $G \cdot x$  be the orbit of  $x$ .

- Prove that there is a bijection between the left cosets  $G/G_x$  and  $G \cdot x$ .
- Prove that the center of every finite  $p$ -group  $G$  is nontrivial by considering that action of  $G$  on  $X = G$  by conjugation.

**1.23 Fall 2015 #1**

Let  $G$  be a group containing a subgroup  $H$  not equal to  $G$  of finite index. Prove that  $G$  has a normal subgroup which is contained in every conjugate of  $H$  which is of finite index.

**1.24 Fall 2015 #2**

Let  $G$  be a finite group,  $H$  a  $p$ -subgroup, and  $P$  a Sylow  $p$ -subgroup for  $p$  a prime. Let  $H$  act on the left cosets of  $P$  in  $G$  by left translation.

Prove that this is an orbit under this action of length 1.

Prove that  $xP$  is an orbit of length 1  $\iff H$  is contained in  $xPx^{-1}$ .

### 1.25 Spring 2015 #1

For a prime  $p$ , let  $G$  be a finite  $p$ -group and let  $N$  be a normal subgroup of  $G$  of order  $p$ . Prove that  $N$  is contained in the center of  $G$ .

### 1.26 Spring 2015 #4

Let  $N$  be a positive integer, and let  $G$  be a finite group of order  $N$ .

- a. Let  $\text{Sym}G$  be the set of all bijections from  $G \rightarrow G$  viewed as a group under composition. Note that  $\text{Sym}G \cong S_N$ . Prove that the Cayley map

$$\begin{aligned} C : G &\longrightarrow \text{Sym}G \\ g &\mapsto (x \mapsto gx) \end{aligned}$$

is an injective homomorphism.

- b. Let  $\Phi : \text{Sym}G \rightarrow S_N$  be an isomorphism. For  $a \in G$  define  $\varepsilon(a) \in \{\pm 1\}$  to be the sign of the permutation  $\Phi(C(a))$ . Suppose that  $a$  has order  $d$ . Prove that  $\varepsilon(a) = -1 \iff d$  is even and  $N/d$  is odd.
- c. Suppose  $N > 2$  and  $n \equiv 2 \pmod{4}$ . Prove that  $G$  is not simple.

Hint: use part (b).

### 1.27 Fall 2014 #2

Let  $G$  be a group of order 96.

- a. Show that  $G$  has either one or three 2-Sylow subgroups.
- b. Show that either  $G$  has a normal subgroup of order 32, or a normal subgroup of order 16.

### 1.28 Fall 2014 #6

Let  $G$  be a group and  $H, K < G$  be subgroups of finite index. Show that

$$[G : H \cap K] \leq [G : H] [G : K].$$

### 1.29 Spring 2014 #1

Let  $p, n$  be integers such that  $p$  is prime and  $p$  does not divide  $n$ . Find a real number  $k = k(p, n)$  such that for every integer  $m \geq k$ , every group of order  $p^m n$  is not simple.

**1.30 Spring 2014 #2**

Let  $G \subset S_9$  be a Sylow-3 subgroup of the symmetric group on 9 letters.

- Show that  $G$  contains a subgroup  $H$  isomorphic to  $\mathbb{Z}_3 \times \mathbb{Z}_3 \times \mathbb{Z}_3$  by exhibiting an appropriate set of cycles.
- Show that  $H$  is normal in  $G$ .
- Give generators and relations for  $G$  as an abstract group, such that all generators have order 3. Also exhibit elements of  $S_9$  in cycle notation corresponding to these generators.
- Without appealing to the previous parts of the problem, show that  $G$  contains an element of order 9.

**1.31 Fall 2013 #1**

Let  $p, q$  be distinct primes.

- Let  $\bar{q} \in \mathbb{Z}_p$  be the class of  $q \pmod p$  and let  $k$  denote the order of  $\bar{q}$  as an element of  $\mathbb{Z}_p^\times$ . Prove that no group of order  $pq^k$  is simple.
- Let  $G$  be a group of order  $pq$ , and prove that  $G$  is not simple.

**1.32 Fall 2013 #2**

Let  $G$  be a group of order 30.

- Show that  $G$  has a subgroup of order 15.
- Show that every group of order 15 is cyclic.
- Show that  $G$  is isomorphic to some semidirect product  $\mathbb{Z}_{15} \rtimes \mathbb{Z}_2$ .
- Exhibit three nonisomorphic groups of order 30 and prove that they are not isomorphic. You are not required to use your answer to (c).

**1.33 Spring 2013 #3**

Let  $P$  be a finite  $p$ -group. Prove that every nontrivial normal subgroup of  $P$  intersects the center of  $P$  nontrivially.

**1.34 Spring 2013 #4**

Define a *simple group*. Prove that a group of order 56 can not be simple.

**1.35 Fall 2019 Midterm #1**

Let  $G$  be a group of order  $p^2q$  for  $p, q$  prime. Show that  $G$  has a nontrivial normal subgroup.

**1.36 Fall 2019 Midterm #2**

Let  $G$  be a finite group and let  $P$  be a sylow  $p$ -subgroup for  $p$  prime. Show that  $N(N(P)) = N(P)$  where  $N$  is the normalizer in  $G$ .

**1.37 Fall 2019 Midterm #3**

Show that there exist no simple groups of order 148.

**1.38 Fall 2019 Midterm #4**

Let  $p$  be a prime. Show that  $S_p = \langle \tau, \sigma \rangle$  where  $\tau$  is a transposition and  $\sigma$  is a  $p$ -cycle.

**1.39 Fall 2019 Midterm #5**

Let  $G$  be a nonabelian group of order  $p^3$  for  $p$  prime. Show that  $Z(G) = [G, G]$
