1.1 1

Suppose $f, g : [0, 1] \rightarrow \mathbb{R}$ where f is Riemann integrable and for $x, y \in [0, 1]$,

$$|g(x) - g(y)| \leq |f(x) - f(y)|.$$

Prove that g is Riemann integrable.

1.2 2

Then use it to prove Cauchy's Theorem for functions that are analytic in a rectangle.

1.3 3

Suppose $\{f_n\}_{n \in \mathbb{N}}$ is a sequence of analytic functions on $\mathbb{D}^\circ := \{z \in \mathbb{C} \mid |z| < 1\}$.

Show that if $f_n \rightarrow g$ for some $g : \mathbb{D}^\circ \rightarrow \mathbb{C}$ uniformly on every compact $K \subset \mathbb{D}^\circ$, then g is analytic on \mathbb{D}° .

1.4 4

Suppose $\{f_n\}_{n \in \mathbb{N}}$ is a sequence of entire functions where

- $f_n \rightarrow g$ pointwise for some $g : \mathbb{C} \rightarrow \mathbb{C}$.
- On every line segment in \mathbb{C} , $f_n \rightarrow g$ uniformly.

Show that

- g is entire, and
- $f_n \rightarrow g$ uniformly on every compact subset of \mathbb{C} .

1.5 5

Prove that there is no sequence of polynomials that uniformly converge to $f(z) = \frac{1}{z}$ on S^1 .

1.6 6

Suppose that $f : \mathbb{R} \rightarrow \mathbb{R}$ is a continuous function that vanishes outside of some finite interval. For each $z \in \mathbb{C}$, define

$$g(z) = \int_{-\infty}^{\infty} f(t)e^{-izt} dt.$$

Show that g is entire.

1.7 7

2 Liouville's Theorem, Power Series**2.1 1**

Suppose f is analytic on a region Ω such that $\mathbb{D} \subseteq \Omega \subseteq \mathbb{C}$ and $f(z) = \sum_{n=0}^{\infty} a_n z^n$ is a power series with radius of convergence exactly 1.

$$\sum_{n=1}^{\infty} \frac{\sin(nz)}{2^n}.$$

3 Spring 2020 Homework 1**4 Spring 2020 Homework 2**

Note on notation: I sometimes use $f_x := \frac{\partial f}{\partial x}$ to denote partial derivatives, and $\partial_z^n f$ as $f^{(n)}(z)$.

4.1 Stein And Shakarchi**4.1.1 2.6.1**

Show that

$$\int_0^{\infty} \sin(x^2) dx = \int_0^{\infty} \cos(x^2) dx = \frac{\sqrt{2\pi}}{4}.$$

Hint: integrate e^{-x^2} over the following contour, using the fact that $\int_{-\infty}^{\infty} e^{-x^2} dx = \sqrt{\pi}$:

**4.1.2 2.6.2**

Show that

$$\int_0^\infty \frac{\sin x}{x} dx = \frac{\pi}{2}.$$

Hint: use the fact that this integral equals $\frac{1}{2i} \int_{-\infty}^\infty \frac{e^{ix} - 1}{x} dx$, and integrate around an indented semicircle.

4.1.3 2.6.5

Suppose $f \in C^1_{\mathbb{C}}(\Omega)$ and $T \subset \Omega$ is a triangle with $T^\circ \subset \Omega$. Apply Green's theorem to show that $\int_T f(z) dz = 0$.

Assume that f' is continuous and prove Goursat's theorem.

Hint: Green's theorem states

$$\int_T F dx + G dy = \int_{T^\circ} \left(\frac{\partial G}{\partial x} - \frac{\partial F}{\partial y} \right) dx dy.$$

4.1.4 2.6.6

Suppose that f is holomorphic on a punctured open set $\Omega \setminus \{w_0\}$ and let $T \subset \Omega$ be a triangle containing w_0 . Prove that if f is bounded near w_0 , then $\int_T f(z) dz = 0$.

4.1.5 2.6.7

Suppose $f : \mathbb{D} \rightarrow \mathbb{C}$ is holomorphic and let $d := \sup_{z, w \in \mathbb{D}} |f(z) - f(w)|$ be the diameter of the image of f . Show that $2|f'(0)| \leq d$, and that equality holds iff f is linear, so $f(z) = a_1 z + a_2$.

Hint: $2f'(0) = \frac{1}{2\pi i} \int_{|\xi|=r} \frac{f(\xi) - f(-\xi)}{\xi^2} d\xi$ whenever $0 < r < 1$.

4.1.6 2.6.8

Suppose that f is holomorphic on the strip $S = \{x + iy \mid x \in \mathbb{R}, -1 < y < 1\}$ with $|f(z)| \leq A(1 + |z|)^\nu$ for ν some fixed real number. Show that for all $z \in S$, for each integer $n \geq 0$ there exists an $A_n \geq 0$ such that $|f^{(n)}(x)| \leq A_n(1 + |x|)^\nu$ for all $x \in \mathbb{R}$.

Hint: Use the Cauchy inequalities.

4.1.7 2.6.9

Let $\Omega \subset \mathbb{C}$ be open and bounded and $\varphi : \Omega \rightarrow \Omega$ holomorphic. Prove that if there exists a point $z_0 \in \Omega$ such that $\varphi(z_0) = z_0$ and $\varphi'(z_0) = 1$, then φ is linear.

Hint: assume $z_0 = 0$ (explain why this can be done) and write $\varphi(z) = z + a_n z^n + O(z^{n+1})$ near 0. Let $\varphi_k = \varphi \circ \varphi \circ \cdots \circ \varphi$ and prove that $\varphi_k(z) = z + k a_n z^n + O(z^{n+1})$. Apply Cauchy's inequalities and let $k \rightarrow \infty$ to conclude.

4.1.8 2.6.10

Can every continuous function on $\overline{\mathbb{D}}$ be uniformly approximated by polynomials in the variable z ?

Hint: compare to Weierstrass for the real interval.

4.1.9 2.6.13

Suppose f is analytic, defined on all of \mathbb{C} , and for each $z_0 \in \mathbb{C}$ there is at least one coefficient in the expansion $f(z) = \sum_{n=0}^{\infty} c_n (z - z_0)^n$ is zero. Prove that f is a polynomial.

Hint: use the fact that $c_n n! = f^{(n)}(z_0)$ and use a countability argument.

4.1.10 2.6.14

Suppose that f is holomorphic in an open set containing \mathbb{D} except for a pole $z_0 \in \partial\mathbb{D}$. Let $\sum_{n=0}^{\infty} a_n z^n$ be the power series expansion of f in \mathbb{D} , and show that $\lim_{n \rightarrow \infty} \frac{a_n}{a_{n+1}} = z_0$.

4.1.11 2.6.15

Suppose f is continuous and nonvanishing on $\bar{\mathbb{D}}$, and holomorphic in \mathbb{D} . Prove that if $|z| = 1 \implies |f(z)| = 1$, then f is constant.

Hint: Extend f to all of \mathbb{C} by $f(z) = 1/\overline{f(1/\bar{z})}$ for any $|z| > 1$, and argue as in the Schwarz reflection principle.

4.2 Additional Problems**4.2.1 1**

Let $a_n \neq 0$ and show that

$$\lim_{n \rightarrow \infty} \frac{|a_{n+1}|}{|a_n|} = L \implies \lim_{n \rightarrow \infty} |a_n|^{\frac{1}{n}} = L.$$

4.2.4 4

$$\lim_{x \rightarrow +\infty} \int_{\gamma_x} f(z) dz = iAb.$$

4.2.6 6

Show by example that there exists a function $f(z)$ that is holomorphic on $\{z \in \mathbb{C} \mid 0 < |z| < 1\}$ and for all $r < 1$,

Hint: use the inverse function theorem.

4.2.8 8

Assume two functions $u, v : \mathbb{R}^2 \rightarrow \mathbb{R}$ have continuous partial derivatives at (x_0, y_0) . Show that $f := u + iv$ has derivative $f'(z_0)$ at $z_0 = x_0 + iy_0$ if and only if

$$\lim_{r \rightarrow 0} \frac{1}{\pi r^2} \int_{|z-z_0|=r} f(z) dz = 0.$$

Let γ be a piecewise smooth simple closed curve with interior Ω_1 and exterior Ω_2 . Assume f' exists in an open set containing γ and Ω_2 with $\lim_{z \rightarrow \infty} f(z) = A$. Show that

$$\frac{1}{2\pi i} \int_{\gamma} \frac{f(\xi)}{\xi - z} d\xi = \begin{cases} A, & \text{if } z \in \Omega_1 \\ -f(z) + A, & \text{if } z \in \Omega_2 \end{cases}.$$

4.2.10 10

Let $f(z)$ be bounded and analytic in \mathbb{C} . Let $a \neq b$ be any fixed complex numbers. Show that the following limit exists:

$$\lim_{R \rightarrow \infty} \int_{|z|=R} \frac{f(z)}{(z-a)(z-b)} dz.$$

Use this to show that $f(z)$ must be constant.

4.2.11 11

$$\lim_{z \rightarrow \infty} \frac{f(z)}{z} = 0.$$

Show that $f(z)$ is a constant.

$$\int_{\gamma} \frac{f'(z)}{(z-z_0)} dz = \int_{\gamma} \frac{f(z)}{(z-z_0)^2} dz.$$

Give a generalization of this result.

4.2.13 13

Compute

$$\int_{|z|=1} \left(z + \frac{1}{z}\right)^{2n} \frac{dz}{z}$$

and use it to show that
